Develop an app that contains a component similar to the one attached (you can see it in action on new10.com) using React. Be creative about it and try to make it different.

1. You will allow users to choose only 1 product from the dropdown:
   - Marketing
   - Equipment
2. You will allow users to choose only 1 legal form from the dropdown:
   - BV
   - Eenmanszak
3. Both the maximum loan amount and the maximum loan duration depend on the choice the user made previously:

	BV	Eenmanszak
Marketing	€ 250,000	€ 250,000
	36 months	36 months
Equipment	€ 500,000	€ 250,000
	60 months	60 months

4. You will show the interest rate for the chosen loan based on the following constraints:
   - The interest rate depends on both the loan duration and the loan amount
   - When the amount is fixed, the interest varies in a linear way
   - The interest rate for loans between € 0 and € 50,000 the interest goes from 6% to 8% based on the chosen duration
   - The interest rate for loans between € 50,000 and € 150,000 the interest goes from 5% to 7% based on the chosen duration
   - The interest rate for loans between € 150,000 and € 500,000 the interest goes from 4% to 6% based on the chosen duration
   - For example, if the user asks for a € 300,000 loan to buy new equipment, and he/she wants to repay in 30 months, the interest rate is going to be 5%.
5. You are not allowed to use any UI framework (Twitter Bootstrap or similar)
6. The UI should not be complex, but we would like to see something "visually pleasant".
7. We suggest you to use Create React App and any other libraries you may need
8. Put the code on Gitlab and share it privately with `medeeiros`
